EXECUTIVE SUMMARY

Analytics and AI executive with 20+ years building decision-science, data and machine-learning capabilities across financial services, fintech and digital platforms. Track record of building analytical capabilities from zero infrastructure to production ML systems across multiple financial-services platforms, spanning MSME lending, vehicle and EV finance, structured credit, and emerging markets.

Technical foundation spans ML (Random Forest, Gradient Boosting, clustering techniques), probabilistic and survival modelling, Monte Carlo simulation, and correlated default modelling. Broader experience includes customer and marketing analytics, lead scoring, conversion optimisation, pricing and demand forecasting, and CRM and data-platform transformation — including growing a real estate digital platform from ₹3,000 Mn to ₹20,000 Mn in revenue. Built enterprise data platforms on Snowflake, Redshift, and BigQuery. Led teams of 25–150 across and delivered projects across India, Africa, and the UK. IIT Bombay · ISB Hyderabad.

AI, ML & Decision Science	Quantitative Methods	Data & Engineering
· Supervised ML · Gradient Boosting · Survival & probabilistic models · Alternate data (IoT, Telecom, Wallet) · Agentic AI · LLM workflows · Credit & collections scorecards	· Monte Carlo simulation · Transition matrix modelling · Correlated default (Gaussian copula) · ECL / PD / LGD frameworks · Structured product stress-testing	· Snowflake · Redshift · BigQuery · AWS Lambda · Kafka · Athena · DWH architecture · Power BI · Python · SQL · Serverless APIs · MLOps · Model governance

PROFESSIONAL EXPERIENCE

Turno — EV Financing · SVP, Risk & Head of AI/ML and Analytics May 2025 – Present

- **AI & Machine Learning:** Deployed LLM-based document verification agents (DL, Aadhaar, insurance IDV cross-validation) and collections PTP verification agents across the origination and servicing workflow. Built thin-file underwriting for NTC customers using logistic regression on telecom usage, IoT signals and application behaviour — no bureau footprint — achieving >50% improvement in risk segregation; GPS-based income proxy via location clustering across urban/rural bands.
- **Asset Intelligence:** Battery SoH degradation model using coulomb counting, depth-of-discharge, temperature, and charge cycle data to distinguish physical from financial depreciation — used directly in LTV and tenor decisions.
- **Data Platform:** Enterprise DWH integrating LOS, LMS, IoT and collections data. ML APIs on cloud infrastructure. Team of ~50 across Credit, RCU, Data Science and Analytics.

KreditBee · Business Head — MSME & Two-Wheeler Lending Feb 2024 – May 2025

- Built MSME and two-wheeler lending verticals from zero; scaled disbursements from to ₹300 Mn/month, reaching ₹2,000 Mn AUM in 9 months. Deployed ML scorecards tuned per sourcing channel. Led team of 150 across sales, credit, operations, and collections.

CARS24 Financial Services · VP, Head of Risk, Data Science and Analytics Mar 2023 – Feb 2024

- **Machine Learning:** Thin-file underwriting using telecom and IoT data; Random Forest models for existing-to-credit customers on bureau and banking data; asset gradation model using post-repo recovery rate as a binary credit feature; roll-forward collection scorecards by bucket severity; IoT GPS clustering for vehicle asset location and recovery.
- **Quantitative Finance:** ECL via Markov-chain transition matrix with state-by-state PD, LGD curves and amortisation schedules; Monte Carlo simulation of correlated default paths for portfolio stress-testing; survival models for default time estimation — applied across a ₹25,000 Mn used-vehicle book.
- **Data Platform:** Snowflake DWH combining LOS, LMS, loan performance and IoT streams. ML APIs on AWS serverless stack. Stratified bureau sampling to benchmark portfolio risk against peer cohort. Team of 50.

Roots Finserv · Co-Founder Jan 2022 – Feb 2023

- **Credit Modelling:** Zero-bureau credit scoring for a Madagascar telecom using telecom usage, wallet transactions and handset metadata; cycle-split model architecture with CDF equivalence mapping across product generations.
- **Structured Finance:** ABS/PTC stress-testing engine built in Python: correlated default simulation via Gaussian copula, survival models for default timing, Markov-chain transition matrices, waterfall/TITP/TIUP tranche cashflows, iterative tranching to target yield. ₹17 Mn consulting revenue; \$4 Mn term sheet secured.

Protium Finance · Associate Partner — MSME Lending · Core Risk Committee

Apr 2020 – Dec 2021

- **Machine Learning & Credit:** Built MSME digital lending from zero; ML scorecards (Random Forest on bank statement and bureau); MicroLAP and large-ticket MSME models; BRE-tested credit policy with line and tenor strategy per risk band. Reached ₹120 Mn/month disbursements and ₹1,000 Mn AUM.
- **Quantitative Credit:** Transition matrix modelling of MSME loan state migration; stress-testing via correlated default simulation and survival models for default timing. Analysis underpinned evaluation and deployment of ₹2,000 Mn in MSME PTC co-lending deals. Core risk committee member with board visibility.

Lendingkart Financial · Chief Analytics Officer

Oct 2018 – Mar 2020

- **Machine Learning Models:** Random Forest and Gradient Boosting models on bank statement, bureau and SMS data (AUC 0.8); quantitative amount/tenor/rate strategy; multi-stage collection scorecards (bounce → RF → 1-30 DPD) on logistic regression; survival model for optimal call-centre allocation on digital leads. Scaled disbursements ₹18,000 Mn → ₹30,000 Mn/year at stable 4.5% credit cost.
- **MLOps & Data Engineering:** ML APIs on AWS Lambda/Kafka (serverless); DWH on Redshift/Athena/BigQuery with Power BI front-end; end-to-end model monitoring and governance. Team of 25.

EARLIER LEADERSHIP

Manappuram Finance — Chief Digital Officer (2017–2018): Built first ML-based digital underwriting and eKYC journey across all group companies; microfinance cross-sell scorecard; enterprise DWH with Oracle.

Hubzu.com — Director, Analytics (2012–2016): US-based real estate digital platform: built customer and marketing analytics, lead scoring and conversion optimisation, search ranking via collaborative filtering, A/B experimentation, and marketing spend optimisation via linear programming. Grew platform revenue from \$30 Mn to \$200 Mn. Team of 25 across US, India, and Luxembourg.

Fidelity Investments — Senior Analyst, Fixed Income Quant (2006–2008): Monte Carlo simulation, stochastic calculus, bond/CDS/prepayment pricing, portfolio optimisation via quadratic programming and genetic algorithms.

eBay · Techspan · Geometric Software (2003–2012): Business analytics; fixed income derivative pricing; computational geometry.

CAREER HIGHLIGHTS

Production AI and ML deployments:

LLM-based document verification and collections agents (Turno) · Thin-file credit models on alternate data (Turno, CARS24, Roots) · ABS/PTC stress-testing engine (Roots) · ML underwriting and collections stack (Lendingkart, CARS24, Protium)

Teams built and led:

~50 Data Science and Analytics (Turno) · 150 cross-functional (KreditBee) · 50 Data Science (CARS24) · 25 Analytics (Lendingkart)

Geographies:

India (primary) · Madagascar and Tanzania (emerging market credit) · UK (wage financing) · US (real estate digital platform) · Open to UAE relocation

EDUCATION

MBA Finance — Indian School of Business, Hyderabad

2009 – 2010

B.Tech Mechanical Engineering — IIT Bombay

1999 – 2003
